O₂. In the following please find our budgetary proposal of a second hand air separation plant, manufactured by Air Liquide, Engineering by A.L.E.C. Canada. The air separation plant is located in South – Europe, operating with 50 Hz. The plant was started-up in 1976 and was in operation till end of December 1999. The particular features of the proposed air separation plant are the design and the completeness of the plant and the excellent technical conditions for production of oxygen (LOX). Additional to your inquiry the plant is able to produce 80 Nm³/h pure argon. Therefore some quantities of H₂ are needed for further purification. Since this plant has for the Main Compressors radiator coolers, those radiators have to be re-calculated and adapted to local maximum ambient temperature conditions.</p>

090	<p>Heat Panel Production Plant Built: 1985 – 1998 Composed of: Welding Line Description There are two welding lines available at the site, one line is dedicated to producing single radiators. The other line is dedicated to producing double radiators.</p>

	<p>The lines are set out in a flow process configuration, beginning with the multispot operation and concluding with the final assembly/testing. Each station is connected with transfer conveyors. The lines operated until July 2005. The lines were maintained to the highest standard during their working life with a strong emphasis placed upon downtime reduction. The lines operated on a two shift basis. Product Range The lines are capable of producing radiators ranging in height from 285 mm to 900 mm. The radiator lengths produced were 500 mm to 3000 mm. The lines are set to produce two connection products. The double lines are capable of producing four connection products in singles or doubles. Price: € 985.000,-- “as it is –where it is” EXW West Europe. Remarks: This factory could be rebuilt at destination.</p>

105	<p>Complete Brick-Work 32 Mio. NF stones p. a. Price: 1.460.000,-- excl. Dismantling. Location: Germany The production ran until approximately July 2004 Transportation approximately 60 - 80 HEAVY GOODS VEHICLES, according to dismantle. Payment 100 percent in advance, per T/T or devoid of. Immediately sell possible. Capacity: 32 million NF stones, NF = 24x1 1,5x7,1 cm) The Capacity can be increased to approx. 40-45 million Stones if the oven becomes enlarged. At present, the oven is approximately 60 meters long. Oven heated with natural gas. The work has an ultramodern electronic control Siemens S5. In this work, U-hulls were manufactured. The production of this very high-quality and costly products is possible only with a good technology. Since the machines in this work have a very good quality standard, such special-products could be produced here, too. The work was extended frequently and improved as well maintained and overhauled. The work was closed because of overproduction in Germany. The work is technically on super condition and on the basis of the latest technology. It will be sold without vehicles like forklifts etc.</p>
106	<p>Complete insulating glass-/ window glass production 1. The glass is cut to size on the glass blade table. The glass blade table can get atilted to almost 90° so that also big glass plates can be transported comfortably. These can be delivered (see holes in the plate) below the plate's situated roles so that a unfolding (further transport) the glass plates to the wash and dry machine is ensured. 2. The ready cut glass reaches the wash and dry machine and is washed and dried here in an operation. (automatic move, inclusive of treatment of water) 3. An on both sides adhesive foil is stuck on to the spacers (aluminium profiles) with a device (picture Iso 4) on the two sides. The spacers are then provided with the corner verb Indians by means of a little saw on your measure zuges?t and respectively on a side. (Corner verb Indian from Plaste, picture Iso 12 A) present be the spacers filled with dry means. (see picture Iso 3 A/dry means filling equipment) the still open parts of the spacer profiles are simply put into the filling device and filled automatically. The ready filled spacers will end</p>

	<p>obliquely to the corner verb Indians' frame ready for one about the still free ones now.</p> <p>4. The ready spacer framework is stuck on to a plate. (the protection foil removes) the other plate gets blatantly and stickily following.</p> <p>5. For the end this is sealed from two plates of existing glass package with the Hot Melt machine. The isolating glass plate is ready. At use of a gas filling (argon) between the two plates a side of the spacer framework remains open, the plate is filled with gas and then locked. (by means of adhesive or rubber seal)</p> <p>All consumption materials like spacer, spacer verb Indian, spacer adhesive film, dry means, Hot Melt sealing, are at a reasonable price and on the market freely available. The supplier sources are submitted to the customer at purchase of the installation.</p> <p>Price: 69.000,-- "as it is" EX work.</p>
